SUMMARY

Final-year MCA (Integrated) student (CGPA 8.69, graduating 2027) with hands-on experience in SQL and Python, and strong fundamentals in DBMS (RDBMS), Data Structures & Algorithms, and Object-Oriented Programming. Built and deployed an end-to-end data and machine learning pipeline, from raw data cleaning and transformation to a live, user-facing release, with version-controlled code, documented methodology, and measured results. Seeking the Data Engineer Intern 2027 role to build reliable, scalable data pipelines and support data-driven decisions.

TECHNICAL SKILLS

Languages: Python, SQL
Data & Databases: RDBMS, DBMS concepts, data cleaning, data transformation, data preprocessing, data validation, ETL concepts
Libraries: pandas, NumPy, scikit-learn, NLTK, Matplotlib, Seaborn, Streamlit
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks
Tools: Git, GitHub, Jupyter Notebook, VS Code
Currently Learning: FastAPI (REST API development), Generative AI

PROJECTS

Hate Speech Detection System | Python, scikit-learn, NLTK, pandas, Streamlit, Git
Live: hatespeechdetectiontfidf.streamlit.app | Code: github.com/NIRBHAYatGIT

- Built an end-to-end data pipeline that ingests a labeled social media dataset, cleans and transforms the text, and classifies it as hate speech, offensive, or neutral using TF-IDF vectorization and Logistic Regression.
- Cleaned and preprocessed the dataset with pandas and NLTK (tokenization, stopword removal, text normalization) to ensure data quality and consistency before modeling.
- Validated the model on a ~4,957-post test set, reaching 86.5% accuracy, with precision, recall, and F1 tracked for all three classes.
- Deployed the model as a live Streamlit application with confidence scores, real-time probability charts, and session-based prediction history, taking it from prototype to a publicly accessible release.
- Maintained source code, documentation, and commit history on GitHub following version-control best practices.

Typing Speed Test Application | Python, Desktop Application

- Built a desktop application that measures typing speed (WPM) and accuracy in real time, with an interactive results screen.
- Implemented error-rate calculation and instant performance-feedback logic, verified with manual test cases against known inputs.

EDUCATION

MCA (Integrated) - Noida Institute of Engineering & Technology, Greater Noida (AKTU) | Expected 2027 | CGPA: 8.69
Class XII - OPS Vidya Mandir, Karnal (CBSE) | 2022 | 84%
Class X - OPS Vidya Mandir, Karnal (CBSE) | 2020 | 87%

CERTIFICATIONS

- Advanced Python Programming - Coursera (University of Michigan), 2023
- Software Testing Fundamentals - Coursera (University of Michigan), 2023
- Web Development Fundamentals - Infosys Springboard
